# Feel the Difference

As soon as you pick up any weapon in this catalog, you will immediately feel the difference. Whether it is the machined perfection of our XR15 rifles, the precision balance of a Sphinx pistol or our complete line of high-performance 6.5mm Grendel rifles, you will know as soon as you wrap your hand around the grip: this is something altogether different.

Sabre products utilize the superior materials, quality control and precision engineering demanded by our largest client: the U.S. Government. If you see U.S. troops with a .50 calibre machine gun or a 7.62mm mini-gun, it is a safe assumption they are using a Sabre barrel. Our troops depend on these barrels every day in the Global War on Terror, and we demand the highest levels of precision. After all, lives depend on it.

Every weapon we build is constructed to this same exacting standard. Pick up one of our rifles and give it a shake. The first thing you'll notice is how solid it is. Nothing moves — there is no rattle of loosely fitting parts.

Other manufacturers assemble their rifles with parts purchased from various machine shops. It cuts costs, but their tolerances have to be looser in order to make sure everything fits together.

That's just not good enough for Sabre. The uppers, lowers and barrels on our weapons are manufactured in-house to incredibly tight tolerances. The result is a weapon with superior fit and finish — a difference you can see and feel.

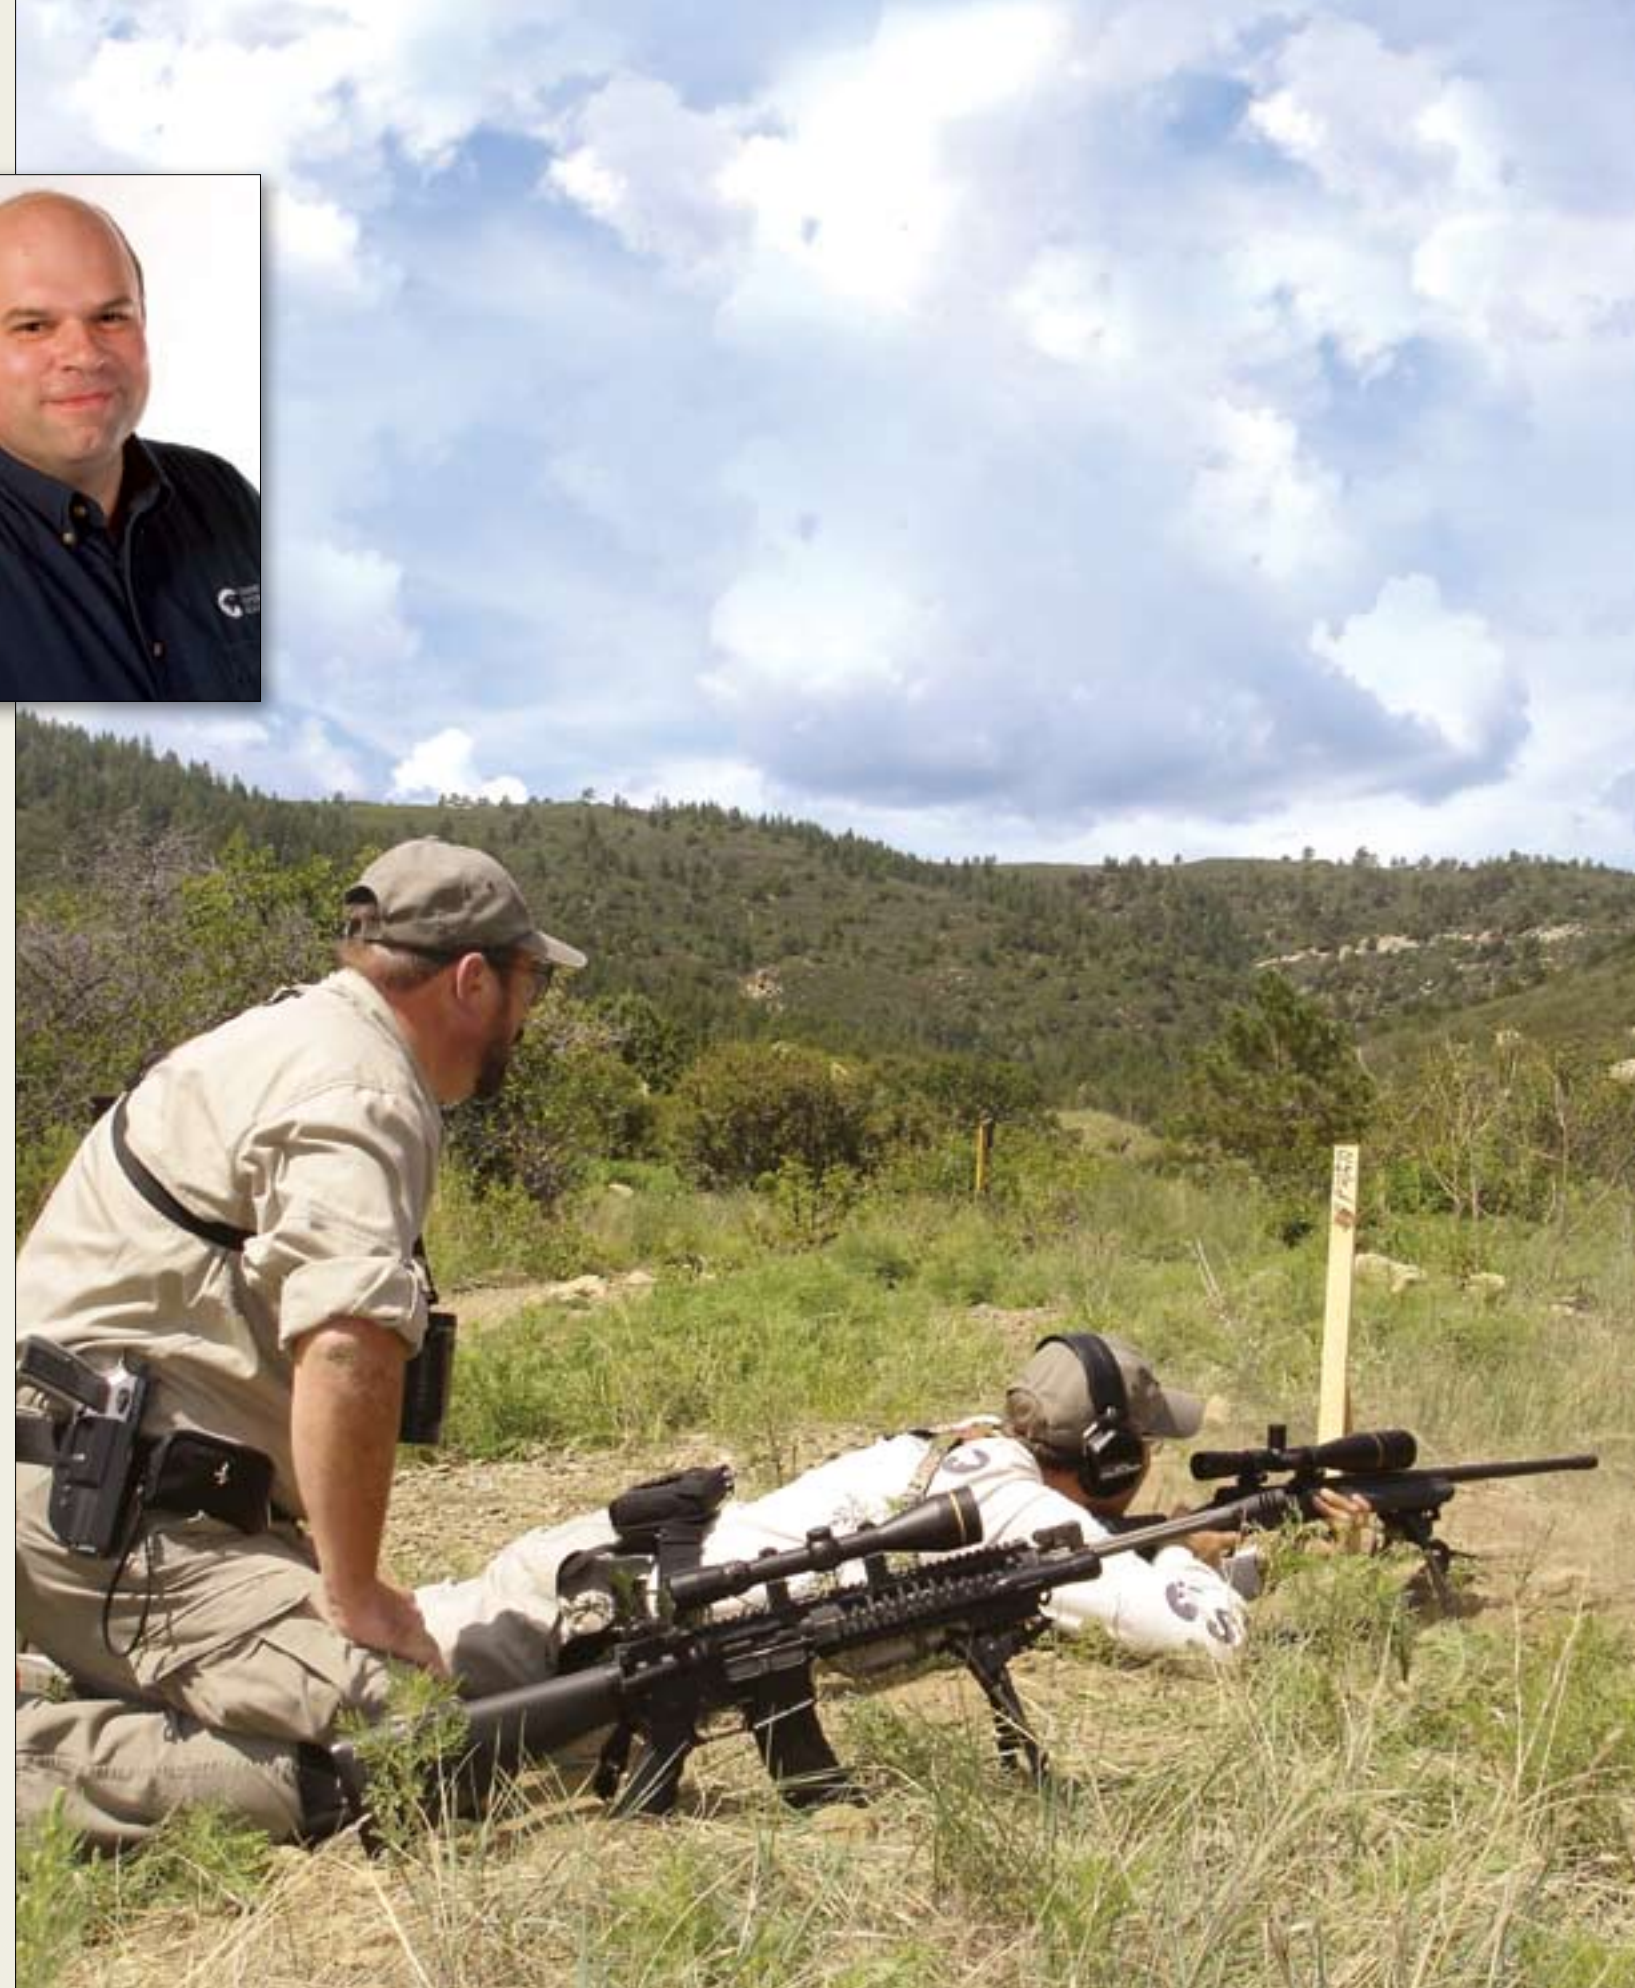

However, the real test is not just in how a firearm feels, but in how it shoots.

Performance is where our meticulous attention to detail pays off. Our weapons perform accurately and reliably, day in and day out. Our "tack drivers," such as our Heavy-Bench Target Rifle, can consistently produce 100-yard groups that measure under one half of an inch. Our competition rifles are so well balanced they can be maneuvered through tight obstacles with one hand. And most important of all, every one of our weapons brings you the highest level of reliability. Our rifles will never let you down.

"Production, Precision, Perfection" is our motto, and creating a superior line of weapons is our passion. Whether you need a rifle for competition, patrol or home security, Sabre is the clear choice.

Thank you for your business. We look forward to serving you in 2007.

Guy Savage  
President, Sabre Defence Industries

## Grendel 6.5mm

The AR15 / M4 platform has long been admired for its reliability and nimble handling. Its rock solid performance in conflicts around the world has proven time and again that this is, in many ways, an ideal weapon. However, many shooters have voiced a desire for a way to give this system better long-range performance and more stopping power than the traditional and trustworthy 5.56mm chambering.

Now, Sabre Defence Industries, LLC brings you the answer: the Grendel 6.5mm. The Grendel is a flat-shooting round designed to give AR15 and M4 style rifles added long-distance performance. Imagine being able to shoot sub-MOA groups at 600 meters with your AR. This level of accuracy is standard for the Grendel 6.5mm.

These rifles are not just limited to long-distance shooting either. The perceived recoil on the Grendel is light and straight back, making follow up shots much faster and easier. This ease of use,

combined with ballistic performance that rivals the 7.62mm NATO round (at around 2/3 the weight), make it an excellent hunting or home defense round as well.

Sabre Defence Industries, LLC presents a complete line of rifles chambered for the Grendel 6.5mm round. Each weapon is crafted with the precision and excellence you have come to expect from Sabre. Best of all, since the Grendel magazines share the same exterior dimensions as 5.56mm magazines, you can shoot both rounds from a single rifle. Simply switch out the upper and the magazine, and you are ready to go.

This round isn't a compromise. It is designed from the ground up to provide a single cartridge that can produce superior performance at ranges from one to one thousand meters. It's pretty obvious, if you want more out of your AR, you want Grendel.

### XR15A3 Competition Deluxe

Today's competitive shooters need a weapon that is easy to handle and manipulate in tight quarters, as well as providing the accuracy required to quickly place rounds on target at any distance. Sabre has what elite competitors need: the feature-rich XR15A3 Competition Deluxe. This rifle's exquisite balance means that you can maneuver it as easily as you would a compact M4. Its 18" barrel and high-quality Sabre construction guarantees match-grade accuracy and iron-clad reliability.

# Sabre Gill-Brake

Imagine shooting at targets 100 yards away and watching the hole being made in the target. With Sabre's Gill-Brake, you can achieve this level of performance. This muzzle brake represents a giant leap forward from the technology of a standard A2 Flash Hider.

Our proprietary design makes effective use of the expanding gas in order to keep the muzzle down. Muzzle flip is almost eliminated and the result is one of the flattest-shooting 5.56mm and 6.5mm Grendel rifles on the market. Rapid follow-up shots are simple—you won't have to reacquire the target after each shot, and as a result your shot groups will be tighter.

**Massad Ayoob, legendary gun writer and law enforcement officer, tested the brake and had this to say:**

**"... from a braced position the dot doesn't even move off the kill zone on a 100 yard target."**

There aren't many rifles out there that can make this kind of claim. If you want to take your shooting to the next level, you need to be using Sabre's Gill-Brake.

SPR Rifle, with featured Sabre Gill Brake on page 11

## Massad Ayooob Professional & Elite Rifles

Sabre has teamed with the legendary firearms instructor, law enforcement officer, and gun writer, Massad Ayooob, to bring you a line of rifles designed to meet the needs of today's law enforcement community. The results of their efforts are two weapons of unsurpassed design and quality. Finally, you can own a firearm good enough to bear the name of Massad Ayooob.

### Massad Ayooob Professional Rifle

This rifle was designed by Mr. Ayooob and Mr. Savage to be the perfect patrol carbine. Its compact design makes it easy-to-maneuver in and around your vehicle. Its balance and handling make it an accurate platform at any range. But most importantly, Sabre quality means this is a weapon you can trust with your life.

- Sabre A3 Upper and Matched Lower CNC Machined from 7075-T6 Forgings
- M4 6-Position Collapsible Stock
- Tapered Mid-Length Handguards
- Ergo Grip
- Two-Stage Match Trigger

"On October 4th, 2006

a test and evaluation was completed on the final three rifle selections.

**Overall, the clear choice and top rifle was the Sabre Defence carbine."**

Fort Collins Police SWAT Carbine Test and Evaluation Report  
SGT Dan Murphy, SWAT

Officer Trevor Smotherman pictured (left) during the evaluation process

# About Sabre

You may not recognize the name Sabre Defence right away, but we are very well known to fighting forces all over the world. The reason is simple: the U.S. Military is our biggest client. If you see a U.S. Army M2 Browning .50 machine gun or a U.S. Air Force M134 7.62mm Minigun it's a sure bet that it is using a Sabre Defence 3 piece, Stellite lined barrel.

We are dedicated to providing the equipment our soldiers need to ensure their safety and security. Our products are heavily deployed in the Global War on Terror in both Iraq and Afghanistan. They save the lives of our troops every day.

With this much at stake, we know our weapons and parts must be reliable. We take every possible measure to ensure the highest levels of quality. Our factory is ISO 9001 registered. Our engineers are highly dedicated and experienced. We utilize the latest CNC turning and machining technology. From basic milling and turning to deep-hole drilling and both cut and button rifling, we can do it all. Our products are built to the tightest tolerances and highest standards in the industry. They have to be so that our soldiers can return home safely.

PRODUCTION  
PRECISION  
PERFECTION

We apply this same level of quality and dedication to every product we make. When you purchase a Sabre XR15, you will receive a rifle built to the same quality standards and specifications demanded by our soldiers in the field. We custom mill most of our rifle parts as well as the barrel in order to produce superior fit, finish and performance.

Even the metal in our barrels is head and shoulders above that of other rifles. We use the same Chrome Moly-Vanadium Alloy that goes into our .50 calibre barrels. This may be overkill for a rifle, but it will last longer, wear better and remain accurate long after an average barrel is reduced to scrap metal. If that isn't enough, you can also get Sabre barrels made out of 410 Stainless Steel, an even tougher and harder alloy. Other manufacturers don't build weapons for the military and as a result, they don't have the access to the superior metals we use.

Additionally, all of our barrels have been heat treated to relieve barrel stress. Other manufacturers don't go this extra mile, and their improperly treated barrels can change shape as heat builds up during sustained fire. Although these changes may not be easy to detect visually, they can significantly affect accuracy. Our barrels don't have this problem. By pre-treating them, we release that stress ahead of time, allowing you to shoot as much as needed without having to worry about your point of impact drifting.

Whether you are buying a rifle for home defense, varmint hunting, competition, patrol or as a SWAT entry rifle you want a weapon you can depend on. You want a superior firearm with excellent handling characteristics and outstanding accuracy. You want a gun built to tolerances found nowhere else in the industry. You want the best rifle you can lay your hands on. You want a Sabre XR15.

## Mid-Length Carbine

Upper Assembly

Barrel Assembly

### XR15A3 Mid-Length Carbine

Sabre's Mid-Length Carbines are designed with longer gas tubes in order to create a softer gas pulse and as a result, less perceived recoil. This makes rapid follow-up shots much easier to execute. Our Mid-Length Carbine features an A2 stock, Detachable carry handle with rear sight and a forged front sight with bayonet lug and A2 flash hider.

Sabre A3 Flat-Top Upper and Matched Lower CNC Machined from 7075-T6 Forgings

- A2 Stock
- Tapered Mid-Length Handguards
- Ergo Grip
- Single-Stage Mil-Spec Trigger
- Forged Front Sight with Bayonet Lug
- A2 Flash Hider
- Detachable Carry Handle with Rear Sight

Barrel Assembly:  
16" Mid-Length Government Contour

# A2 Rifle

# A2 National Match Rifle

## XR15A2 Rifle

The M16A2 has, since the Vietnam War, been the rifle of choice for the U.S. Military. Although it is being phased out in favor of the more compact M4 carbine, the M16 design is a classic that has earned its place of honor on the battlefields of the world. Now, you can own this archetype of the modern combat rifle. The original M16A2 model has been combined with Sabre quality to create the XR15A2, the finest M16 style rifle on the market.

- Sabre A2 Upper and Matched Lower CNC Machined from 7075-T6 Forgings
- A2 Stock
- A2 Round Handguards
- A2 Grip
- Single-Stage Mil-Spec Trigger

## XR15A2 National Match (NM) Rifle

National Match Rifle competitions require one thing: that your rifle has the external characteristics and measurements of the original M16A2. Don't judge a book by the cover though. Your competitive edge comes from what's inside. Sabre's superior construction, tight tolerances and dedication to quality make this the Cadillac of competition rifles.

- Sabre A2 Upper and Matched Lower CNC Machined from 7075-T6 Forgings

# Sphinx Pistols

The name Sabre Defence Industries has always been synonymous with quality. So when we set out to bring you a handgun to compliment our line of XRI5 rifles, we knew we had to find the best. Our customers would settle for nothing less.

We are proud to bring you the results of our search, a firearm that, in our opinion, is the best carry gun produced today: the Sphinx 3000. Sphinx is a Swiss manufacturing company specializing in production of high-performance pistols that deliver amazing accuracy and rock-solid reliability.

The quality of these pistols is apparent as soon as you pick one up. Incredible balance, combined with first class ergonomic design, means these handguns will fit your hand like a glove.

Sphinx's light rail, ambidextrous controls, convertible magazine catch and serrated front strap give you the features great shooters demand. A low bore-line over the grip combined with a heavy dustcover place the weight forward on the gun, effectively reducing muzzle flip and felt recoil. These are just a few of the advantages you will find on this outstanding handgun.

**In the end though, it's not the features that make an exceptional handgun, it's the quality and reliability. When it comes to superior design and reliable performance, it simply doesn't get any better than Sphinx.**

A Sphinx pistol is not assembled, it is crafted. Each handgun produced is the product of years of knowledge, expertise and experience. Behind every pistol stand professional craftsmen who create them with extraordinary diligence and passion. The Sphinx dedication to quality is so deep that they are the only manufacturer in Switzerland that has undergone the rigorous official tests and trials required to be certified as a "Swiss Ordinance Pistol."

Swiss quality, precision design and meticulous construction by dedicated craftsmen are combined in the Sphinx 3000 to produce the best competition, service or carry pistol on the market.
